// note="Organ: ovary; Vector: pBluescript II KS(+); Site_1:

BCORI, Site_2: Not! This normalized library was
CONSTRUCTED from! million independent clones. CDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.

Following this first strand synthesis reaction.

Following this first strand reaction, double-stranded CDNA
was blunted, ligated to NotI adapters, digested with
ECONI, size-selected, and cloned into the NotI and ECORI
COMPATIBLE SITES of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., PNAS
(1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
(1996): 791, except that a significantly longer
reannealing hybridization was used."

ö 780 540 540 600 999 9 720 The present invention provides novel human proteins (NHP8) and their encoding polynucleotides. The invention is useful for diagnosis, drug screening, clinical trial monitoring, treatment of diseases and disorders such as cancer and arthritis and cosmetic applications. The invention acts as a cytostatic and virucidal agent. The invention is useful in gene therapy. The present sequence is a novel human protein (NHP) encoding CDNA. The NHP encoding cDNA is located on human chromosome 8. 120 180 180 240 240 300 300 360 360 420 420 480 480 600 120 9 9 GCACGGCTCTCGGGACTCAGGAATTACACCTGCATGGCAGCCAACATCGTGGCTAAGAGG ATGCAGATATTCTTCAAATGCAACGGCGAGTGGGTCCATCAGAACGAGCACGTCTCTGAA CACCTGGGTACCTCCAAGAGGCAGGAAGGCCTCTGTGCGCATAGCCTATTTACGGAAAAAC TTTGAACAAAGACCCACAAAGGAAGGTAGGTACCCATTGAAGGCATGATTGTACTGCACTGC GACTCTGAACAAGACGAGAACATTGACACGGGCTGACCATAACCTGATCATCAGGCAG AGAAGCCTGTCGGCCACTGTTGTGGTCTACGTGGATGGGAGCTGGGAAGTGTGGAGGAAA CTGGGGCTGTTGTTGGGCGGCAGGACCGCGGCTGCCCGAGGAACTGACAATGGCGAA GCCCTTCCCGAATCCATCCCATCAGCTCCTGGGACACTGCCTCATTTCATAGAGGAGCCA GATGATGCTTATATTATCAAGAGCAACCCTATTGCACTCAGGTGCAAAGCGAGGCCAGCC GAGACTCTGGACGAGAGCTCAGGTTTGAAGGTCCGCGAAGTGTTCATCAATGTTACTAGG CAACAGGTGGAGGACTTCCATGGGCCCGAGGACTATTGGTGCCAGTGTGGCGTGGAGC caccreseracerecaagascassassecererersesecarasecrarrancesaaaaae TTTGAACAAGACCCACAAAGGGAAGTTCCCATTGAAGGCATGATTGTACTGCACTGC CGCCCACCAGGGGGGGGTCCCTGCTGCGGGGGGGGAATGGCTGAAAATGAAGAGCCCATT GATGATGCTTATATTATCAAGAGCAACCCTATTGCACTCAGGTGCAAAGCGAGGCCAGCC Gaps DB 13; Length 2736; .. 0 Sequence 2736 BP; 713 A; 715 C; 695 G; 613 T; 0 U; 0 Other; Indels . ; Score 2736; D; Pred. The invention is useful for diagnosis, drug screening, clinical trial monitoring, treatment of diseases and disorders such as cancer and arthritis and cosmetic applications. The invention acts as a cytostatic and virucidal agent. The invention is useful in gene therapy. The present sequence is a novel human protein (NHP) encoding cDNA. The NHP encoding cDNA is located on human chromosome 8.
                                                                                                                                                                8

                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides novel human proteins (NHPB) and their encoding polymuclocides. The invention is useful for diagnosis, drug screening, clinical trial monitoring, treatment of diseases and disorders such as cancer and arthritis and cosmetic applications. The invention ests as a cytostatic and virucidal agent. The invention is useful in gene therapy. The present sequence is a novel human protein (NHP) encoding cDNA. The NHP encoding cDNA is located on human chromosome 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            540

ADR44592 standard; cDNA; 2661

RESULT 5 ADR44592 ID ADR4

3 The present invention provides novel human proteins (NHPs) and their encoding polynucleotides. The invention is useful for diagnosis, drug screening, clinical trial monitoring, treatment of diseases and disorders such as cancer and arthritis and cosmetic applications. The invention acts as a cytostatic and virucidal agent. The invention is useful in gene therapy. The present sequence is a novel human protein (NHP) encoding CDNA. The NHP encoding cDNA is located on human chromosome 8. 120 GCCCTTCCGGAATCCATCCCATCAGCTCCTGGGACACTGCCTCATTTCATAGAGGAGCCA 180 9 8; "Single nucleotide polymorphism (SNP)" /\*tag= d /standard\_name= "Single nucleotide polymorphism (SNP)" CTGGGGCTGTGCTTCTGGGCGGCAGGGACCGCGGCTGCCCGAGGAACTGACAATGGCGAA 1 ATGGGGAGAGCGGCCACCGCAGGGGCGCGGGGGCGCGCCCCCGTGG New isolated human proteins and nucleic acids, useful for diagnosing, drug screening, clinical trial monitoring, or treating diseases and disorders, e.g. treating cancer, arthritis, or as antiviral agents. The gene is used for treating and preventing neuron disorders and in gene therapy. This sequence encodes the neuroprotective protein showing an activity equivalent to members of the unc gene family
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gene family, neuron disorder, neuroprotective, gene therapy, gene, human.

```
The present invention describes an isolated PRO nucleic acid (I). Also described: (I) a vector comprising (I); (2) a host cell comprising the vector of (I); (3) a process for producing a PRO polypeptides; (4) an isolated PRO polypeptide; (5) a chimeric molecule comprising the cisolated PRO polypeptide; (5) a chimeric molecule comprising the composition of matter comprising a polypeptide of (4); an agonist or antibody which specifically binds to a polypeptide of (4); an agonist or composition of matter comprising a polypeptide of (4); an agonist or antibody which specifically binds to a polypeptide of (4); an agonist or comprising a container, a label on the container and a composition of matter of (7); (9) a method of treating an immune related disease in a mammal; (10) a method for determining the presence of a PRO polypeptide or an a sample suspected of having the polypeptide; (11) a method of identifying a compound that inhibits or changing an immune related disease or an inflammatory immune response or an inflammatory immune response or an inflammatory in mammal. The propersion of stimulating the immune response in a mammal. The PRO sequences have antiallargic, antithrandic, immunosuppressive, muscular, had the encoded polypeptides, cempositions, kits and methods of the present sequence or represents a human component of the present sequence represents a human component of the propertion of the present sequence represents a human component of the propertions. The present sequence represents a human component of the propertion or propositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  154

Db 2553 AGGACAGCACTTTCCCTGCACAGACTGGCCCCAAAGTCTCAAAATTCCCTACTCCATCA 2612  Qy 2447 GACAGCGGATTTGTGCTACATTTGATACCCCCAATGCCAAAGGCAAGGACTGGCAGATGT 2506  1	RESULT 8 AD024624 ID AD024624 ID AD024624 AC AD024624; XX	DE Human soft tissue sarcoma-upregulated DNA - SEQ ID 7444. XX XW KW ds. XX XX XX XX XX XX NO2004048938-A2.	10-JUN-2004. 26-NOV-2002; 26-NOV-2002; (PROT-) PROT Aziz N, Gin		The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and an anomal soft tissue sample from the same or different individual, determining the expression of agene in both samples and comparing the expression of the soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue carcoma, possibly via gene therapy or vaccine production. The nucleic caid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

The present invention relates to the isolation of human G-protein coupled receptors (GPCRs, designated GCREC), and the polynucleotide sequences encoding them. The GCREC polypeptides or their fragments, and the contouing them. The GCREC polypeptides or their fragments, and the polynucleotides sequences encoding them are useful in diagnosing.

C preventing, and treating disorders associated with an abnormal expression or activity of INTSIG, such as neurodespenarative disorders (e.g. Parkinson's disease, Alzheimer's disease), muscular disorders (e.g. Parkinson's disease), cancers (e.g. leukaemia, cervical or breast cancers), cimmunological disorders (e.g. scleroderma, cervical or breast cancers), cimmunological disorders (e.g. scleroderma, systemic lupus erythematosus, allergies), gastrointestinal disorders (e.g. Crohn's disease), renal disorders (e.g. acodesseuse), infections (e.g. viral, bacterial, fungal, parasitic, protozoal, helminthic), cardiovascular disorders (e.g. atherosclerosis), or hepatic diseases (e.g. cirrhosis). GCREC or its fragments may also be used in screening for compounds that specifically bind to and modulate the activity of GCREC. The specifically bind to and modulate the activity of GCREC. The animals to model human disease, ABX17847-ABX1991 represent cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New GCREC polypeptides, useful for diagnosing, preventing, and treating disorders associated with an abnormal expression or activity of GCREC, e.g. neuromuscular, immunological, cardiovascular disorders, cancer and infection.

Transmembrane protein of the neutrin receptor family, and to the use of this protein and the DNA sequence which encodes it for diagnosis, protein and the DNA sequence which encodes it for diagnosis, proteins which are involved in both repelling and attracting axions and the tunction as guidance molecules for cell migration and axon pathing that of the invention have been shown to play a role in diverse physiological functions and they may be involved in many diseases, particularly inflammatory diseases, oncology and cardiovascular disease. Compounds which medulate the transmembrane protein of the invention may therefore have cytostatic, antiinflammatory, immunosuppressive, cardiant, anti-HIV, neuroprotective, notropic, antiparkinsonian, antidepressant, neuroleptic, osteopathic, antiatreriosclerotic, nephrotropic, immunosuppressive, cardiant, the protein and amino acid sequence of the invention may be useful for gene therapy. The protein, nucleic acid (and compound and pharmaceutical composition) of the invention may be useful for the protein and amino acid sequence of the invention may be useful for composition) of the invention may be useful for the medicament for treating disease, such as cell proliferative disorders, medicament disorders, neurological disorders, payeniatric disorders, cardiance developmental disorders, bone disease, atherosclerosis, cardiance and an birth complications. The present sequence is the cloned cannot when the completions. The present sequence is the cloned cannot be cloned the composition of the medicant sequence is the cloned.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              102 AGGAACTGACAATGGCGAAGCCCTTCCCGAATCCATCCCATCAGCTCCTGGGACACTGCC 161

The present invention relates to the isolation of novel human polypeptides referred to as NOVX (NOV1-NOV44), variants of these proteins, and the polynucleotide sequences encoding them. The NOVX proteins of the invention are G-protein coupled receptor (GPCR) related proteins. The sequences of the invention are useful in the manufacture of a medicament for treating a syndrome related to a human disease associated with the polypeptides e.g. cancer. ABX70402-ABX70499 represent DNAs encoding the human NOVX proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            397
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  461

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human G protein-coupled receptor-related (GPCR-related) polypeptides (designated NOVX) and the polymucleorides encoding them. The polypeptides and polymucleotides are useful as therapeutics in the manufacture of medicaments for treating syndromes associated with human diseases. The sequences are useful for treating a disorder human diseases. The sequences are useful for treating a disorder associated with aberrant NOVX expression or activity such as cardiomyopathy, atherosclerosis, hypertension, congenital heart defects, aortic stenosis, atrial septal defect (ASD), atrioventricular canal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 23; SEQ ID NO 115; 287pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tchernev VT, Liu X,

This invention relates to a novel human protein (INSP017), a transmembrane protein of the netrin receptor family, and to the use of transmembrane protein of the netrin receptor family, and to the use of this protein and the DNA sequence which encodes it for diagnosis.

Chis proteins and treatment of disease. Netrins are a family of secreted proteins which are involved in both repelling and attracting axions and thus function as guidance molecules for cell migration and axon pathchinds processes in the central nervous system. Transmembrane proteins such as that of the invention have been shown to play a role in diverse particularly inflammatory diseases, oncology and cardiovascular disease. Compounds which modulate the transmembrane protein of the invention may therefore have cytostatic, antinflammatory, immunosuppressive, cardiant, anti-HV, neuroprotective, notropic, antiparkinsonian, antidepressant, neuroleptic, osteopathic, antiarteriosclerotic, nephrotropic, immunomodulator, antidiabetic or antiinfertility activity. In addition, the protein and amino acid sequence of the invention may be useful for the manufacture of a composition) of the invention may be useful for the manufacture of a composition) of the invention may be useful for the manufacture of a mediovascular disorders, neurological disorders, psychiatric disorders, cardiovascular disorders, neurological disorders, psychiatric disorders, cardiovascular disorders, hurvinfections, metabolic disorders, pregnancy disorders and birth complications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides novel human proteins (NHPB) and their encoding polynucleotides. The invention is useful for diagnosis, drug screening, clinical trial monitoring, treatment of diseases and disorders such as cancer and arthritis and cosmetic applications. The invention acts as a cytostatic and virucidal agent. The invention is useful in gene therapy. The present sequence is a novel human protein (NHP) encoding CDNA. The NHP encoding cDNA is located on human chromosome 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TTTGGTPACTCCCCTGCTCCTGAATTCTGCCATGCAGCCAGATCTGAACCAGTGAGCCGGACA 540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1413
                                                                                                                                                                                                                                     The present invention provides novel human proteins (NHPs) and their encoding polynucleotides. The invention is useful for diagnosis, drug screening, clinical trial monitoring, treatment of diseases and disorders such as cancer and arthritis and cosmetic applications. The invention acts as a cytostatic and virucidal agent. The invention is useful in gene therapy. The present sequence is a novel human protein (NHP) encoding cDNA. The NHP encoding cDNA is located on human chromosome 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             567
